Management Responsibility and Compliance within GMP

Lead with confidence – drive quality & compliance in a GMP world

Strong GMP compliance needs strong and confident leaders. This course equips you to step confidently into your GMP leadership role, have overview of your responsibilities and stay in control – every day.

GMP compliance requires clear and committed leadership.

This course equips you with the knowledge, tools, and confidence to take ownership of compliance with clarity and positive energy in your daily management role.

As a manager in a GMP-regulated environment, you play a crucial role in ensuring product quality and patient safety. You will gain a practical understanding of what EU and FDA regulators expect from management — and how these expectations shape your priorities, communication, and leadership approach.

The course focuses on building and embedding a strong GMP culture, where quality is part of everyday behavior — not just documentation. A key element is strengthening the quality mindset within your team, ensuring that quality becomes an integrated part of daily work rather than an added task.

Through cases, dialogue, workshop-based sessions, and experience sharing with other leaders, compliance requirements are made concrete, and you gain insight into proven approaches that can be applied directly in your own organization.

You will develop a clear understanding of what compliance means in practice, what is expected of you as a leader, and how to maintain oversight of your responsibilities and team. You will leave the course with greater confidence in your role, a sharper overview of your responsibilities, and practical tools you can use immediately — enabling you to lead with clarity and impact in a GMP environment.

The course is workshop-based and centers on experience sharing and real-life leadership challenges.

The course language is English.

At the course, you will meet:

Mette Beier Schousboe, External Consultant

Ida Swedenborg, Educational Consultant, Pharmakon
